3 Services and Applications

3.1 Data Service

3.1.1 Accessing the Internet Using an LTE, 3G or 2G Network

Functioning as a Wireless Modem

The E5770s-320 can be used as a wireless modem when the Wi-Fi is enabled. You can access the Internet service through setting up the wireless network connection with the E5770s-320.

A maximum of ten wireless users can access the E5770s-320 at the same time. You can set up the WLAN with the access point (AP) function.

Figure 3-1 Connecting multiple devices through Wi-Fi

Functioning as a USB Modem

After you connect the E5770s-320 and PC with a USB data cable, the Web page is displayed on the PC desktops automatically. You can directly use the default settings (or configure APN on the E5770s-320 Web page) and set up a network connection. Then you can send or receive E-mail, access the network through wireless connection, and download files through wireless data channels.

Figure 3-2 Connecting a single device through USB

Providing Network Connection Using the Ethernet Port

After you connect the E5770s-320 to a PC using a network cable to support automatic identification of the WAN/LAN port in access mode, you can configure the APN on the E5770s-320's Web page or use the default APN settings, and set up a network connection. You can then send or receive emails, browse Web pages, and download files from the PC using the E5770s-320's data connection.

Setting Up Connections Using Wi-Fi, USB, and the Ethernet Port Simultaneously

Multiple devices can connect to the E5770s-320 simultaneously using Wi-Fi, USB, and the Ethernet port.

Figure 3-4 Connecting multiple devices through Wi-Fi, USB, and Ethernet port simultaneously

3.1.2 Accessing the Internet Using Ethernet

A network cable is connected with the Ethernet port of the E5770s-320, to support automatic identification of the WAN/LAN port in access mode, and automatic selection of accessing manners of ADSL domestic wideband, DHCP hotel wideband or static IP wideband. It is unnecessary to select the accessing manners after entering into the Web page manually. You can easily access the Internet using the Ethernet to save your LTE/3G/2G network flow and fee.

Figure 3-5 Accessing the Internet using Ethernet

3.1.3 LTE/3G/Wi-Fi Auto Offload

The E5770s-320 allows you to access the Internet via LTE/3G or Wi-Fi. When you are using the E5770s-320 in areas with a Wi-Fi hotspot, for example, an airport, a cafe, a hotel, or your home, the E5770s-320 switches to Wi-Fi connection automatically, saving your LTE/3G network traffic fees.

After the function is enabled, a maximum of nine wireless users can access the E5770s-320 at the same time.

Figure 3-6 LTE/3G/Wi-Fi auto offload

3.2 SMS

The E5770s-320 supports message writing/sending/receiving. You can manage messages through the Web page, such as an inbox, an outbox and a draft.

3.3 Sharing Storage

When the Mobile WiFi is connected to a storage device, such as a USB flash drive or portable hard disk, you can share the device's data using the HUAWEI HiLink APP or the Mobile WiFi web management page.

Note:

If you're using storage sharing, you won't be able to connect to the Internet using a data cable and computer.

3.4 Supplying power to devices

The E5770s-320 can work as a portable power supply (rated output: 5V, 2A) for other devices, such as phones, tablets, music players, and Bluetooth headsets. You can charge those devices by simply connecting them to the E5770s-320 using a USB cable. The E5770s-320 supports plug and charge whether it is on or off.

Some devices can be charged only when the Mobile WiFi is on.

Note:

- Do not connect both connectors of a data cable to the E5770s-320.
- If the E5770s-320 is overheating or its battery level is low, it will stop charging other devices to ensure its performance.
- Do not fling the charging sling to avoid injuring others or the device itself.
