

NIGHTHAWK M1 APN Stuck Instructions

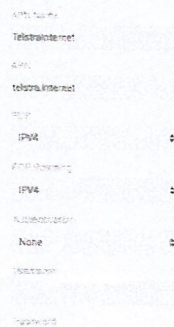

1. Power on your Nighthawk M1 device
2. Connect to the device's Wifi (Usually begins with TPPxxxxxx) (5G network or normal will not differ)
3. Open your browser and navigate to <http://m.home>
4. Enter your devices log in details (or set up a login name and password if this has not been done)
5. Click on SETTINGS at on the top Menu bar

6. Click on Advanced settings and then Cellular

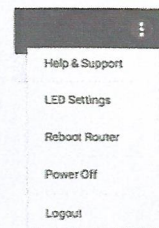

7. Click ADD under the APN section and then enter the details as follows:

You will know see 2 of the same APNs listed, this is fine.

8. Use the menu on the top right to REBOOT ROUTER

9. Once reboot is complete, connect to the device's Wifi again and continue to SETTINGS, Advanced, Cellular.

10. Edit the Bottom APN entry and Click the box that says ACTIVE and press SAVE.

EDIT APN

Active 
APN Name

11. Once you see the Green Tick next the second APN you can now edit it with your providers APN details and save the information (Note: You will need to find out your Telecommunications Suppliers APN details, a quick google search for eg. 'OPTUS APN SETTING' will usually yield results
